Changing DNS settings

Domain names · https://kyzoe.be/en/docs/changing-dns-settings/

Enhance is the underlying hosting and server panel that Kyzoe Hosting uses. It is mainly used for **technical and structural settings**.

- Log in to the **hosting panel**
- On the left, choose the correct **server** or **website**.
- **Click on Domains,** and choose the correct domain if there are several.
- Then choose DNS records
- Choose Add record.
  - Choose the type
  - Under host, enter the host name (**note: always without the full domain name**)
  - Under host, enter the value you have been given. For CNAME records you must always end with a **full stop**, otherwise our DNS system will append your domain name to it.
  - Finally, enter the TTL time; 3600 seconds is usually fine. (**Unless stated otherwise**)

> **Please note: some settings are technical in nature. If in doubt, it is best to contact us first.**
