Changing the DNS servers of a domain name

Domain names · https://kyzoe.be/en/docs/changing-the-dns-servers-of-a-domain-name/

Domain registration and hosting are two separate services. This means you can point the domain name you registered with Kyzoe.be to a hosting package or other service you purchase elsewhere (and vice versa). Once you have the name servers of the provider where you ordered your hosting, you can point the domain name to it.

Here's how:

- **Log in to your client area**
  Go to your client area and open the domain concerned.
- **Click Domain names**
  select the domain name you want to change
- **Click Change name servers**
  enter the DNS servers of the hosting provider.

It can take up to 24 hours for the DNS changes to take effect. Once the DNS changes have been applied, you can adjust the settings at the provider you have pointed the domain name to.
