How do I transfer a domain name?

Domain names · https://kyzoe.be/en/docs/how-to-transfer-a-domain-name/

You can easily transfer a domain name to us. In the vast majority of cases you will need a **token**, also known as an **authorisation code**, **transfer code**, **transfer key**, **auth code** or **EPP code**. You can request this code from your current provider or the registrar that currently manages the domain name.

How to transfer your domain name to Kyzoe Hosting

1. **Request the transfer code**
   Contact your current provider and request the transfer code (EPP code) for your domain name. At the same time, check that the domain name is not locked (*domain lock*). If necessary, this must be removed first.

2. **Start the transfer request**
   Go to https://kyzoe.be/bestellen
   Enter your domain name and add it to the cart

3. **Enter the transfer code**
   During the ordering process you will be asked to enter the transfer code. Check it carefully; an incorrect code can delay the transfer or cause it to fail.

4. **Complete the order**
   Complete the order and, where applicable, the payment. Once this is done, we will automatically start the transfer procedure.

5. **Confirmation by email**
   In many cases you will also receive a confirmation email (from the current registrar or registry). It is important that you confirm this to complete the transfer successfully.

What can you expect?

- A domain transfer takes on average **a few hours to a few days**, depending on the extension (.be, .nl, .com, …).
- Your domain name remains active during the transfer; there is normally **no downtime**.

- For most extensions, the registration period is automatically **extended by one year**.
