Installing WordPress in the Enhance control panel

Hosting panel · https://kyzoe.be/en/docs/install-wordpress-in-the-enhance-control-panel/

In this guide you install a complete WordPress website in just a few clicks. Ideal if you want to build your own blog, business site or online shop.

What do you need?

- A website that has already been created in the control panel (see our guide "Adding a new website")
- Your login details for the control panel

Step 1: Log in and choose your website

Go to **https://cp.vcloudhosting.eu** and log in. In the menu on the left, click **Websites** and then click the website on which you want to install WordPress.

Step 2: Go to the installer

Within your website's settings, click **WordPress** (or **Apps**, depending on your screen). Then click the **Install WordPress** button.

Step 3: Fill in the details

Fill in the following fields:

- **Site title**: the name of your website, for example "My Company". You can always change this later.
- **Username**: the login name you will use to manage WordPress. Choose something other than "admin" for extra security.
- **Password**: choose a strong password and keep it safe.
- **Email address**: this is where you will receive important notifications about your website.

Step 4: Install

Click **Install**. The system now automatically sets up WordPress for you, including the database and all settings. This usually takes less than a minute.

Step 5: Log in to WordPress

As soon as the installation is complete, you will see a link ending in `/wp-admin`. From now on, you log in to your WordPress dashboard via that link, using the username and password you have just chosen.

Tip: save the link `https://jouwdomein.be/wp-admin` in your bookmarks so you can always find it quickly.

What next?

Your WordPress website is ready to be set up. You can now choose a theme, create pages and add your content. Want a handy extra such as a contact form, newsletter or online shop? There are thousands of plugins for that.

Need help?

Would you rather we set up or configure your website for you? Or are you stuck during the installation? Feel free to send an email to **support@kyzoe.be** and we will help you.
