Website migration by Kyzoe

General · https://kyzoe.be/en/docs/website-migration-by-kyzoe/

At the moment, this service is only offered for Linux/PHP web hosting packages with MySQL databases.

- Information we need from you for this service:
- The website/domain you want to migrate – The URL of the website, whether it is a subdomain or a TLD.
- The total size of the current disk storage, including the size of the MySQL database (if applicable).
- The application the website was built with (if applicable) – For example, if your website uses a CMS such as WordPress, Drupal or similar.
- A user/administrator login for the website, if this functionality is available.
- If it is a custom site that uses a MySQL database, please provide the location of the connection string.
- Control panel login – If you have a control panel with your current provider, we need these details to check your existing hosting configuration.
- File and database backup – Give us a way to download these backups, or the details to obtain them (see SSH/FTP).
- DNS/domain access – Access to your domain name registrar/DNS hosting.
- SSH/FTP access – A user account.

Submit this information via our secure migration form and we will assess your site and get in touch with you about the migration and when we can carry it out.
