What is a domain alias?

Domain names · https://kyzoe.be/en/docs/what-is-a-domain-alias/

When you purchase a hosting package from **Kyzoe Hosting**, the package is linked to one domain name. We call this the **main domain**. You can add extra domain names to the same hosting package as an **alias**. These alias domains share exactly the same properties as the main domain.

Example

You have a hosting package with Kyzoe Hosting that is linked to the main domain: **your-own-domain.be**

Your website runs on this domain and you have created an email address: **info@your-own-domain.be**

You now want to add the domain **your-own-domain.com** as an alias to the same hosting package.

Once this domain has been set up as an alias:

- Visitors to **your-own-domain.com** see the same website as on **your-own-domain.nl**

Technically, everything remains linked to one hosting package and one mailbox, which keeps management simple.
