# What is a token or EPP code (transfer code)?

Domain names · https://kyzoe.be/en/docs/what-is-a-token-or-epp-code-transfer-code/

A token, also known as an authorisation code, transfer code, transfer key, auth code or EPP code, is a code made up of a series of numbers, letters and/or characters that is used to start the transfer of a domain name. You can request the token from your current provider, and in principle it may only be given to the owner of the domain.
